Udemy Courses Analysis (Power BI)

A multi-page interactive Power BI report analyzing Udemy courses: subscribers, pricing, reviews, and content, to understand which subjects and pricing strategies attract the most learners.

Home

Business Questions

- Which subjects have the most courses and the most subscribers?
- How does price relate to course length and popularity?
- Do free courses attract more learners than paid ones, and how do reviews and content volume compare?
- How did the number of courses and subscribers change over the years?

Dataset

- **Source:** Public Udemy courses dataset (add the link here)
- **Size:** 3,676 courses across 4 subjects (Web Development, Business Finance, Graphic Design, Musical Instruments)
- **Main fields:** subject, course title, level, payment (Free/Paid), price, price category, number of lectures, content duration, number of reviews, number of subscribers, year

Tools

Power BI Desktop: Power Query (data cleaning), DAX measures, interactive visuals, slicers, page navigation buttons

Report Pages

1. Home

Landing page with navigation buttons to every page of the report.

2. Overview

Overview

KPI cards (courses, lectures, reviews, subscribers, min/average/max price), subscribers by subject, courses by subject (treemap), subscribers and courses by year, and the top courses by subscribers.

3. Price Analysis

Price Analysis

Average price vs content duration, subscribers by price, average price by subject, and Free vs Paid splits for subscribers, reviews, and lectures.

4. Course Details

Course Details

A detailed course table (subject, title, level, payment, lectures, subscribers) with slicers to filter by payment type and level.

Key Insights

KPI	Value
Total Courses	**3,676**
Total Lectures	**147,395**
Total Reviews	**574,210**
Total Subscribers	**11.7M**
Average Price	**$66.1** (max $200)

1. **Web Development dominates:** it has the most courses (1,199) and the most subscribers (7.9M, about 67% of all subscribers), far ahead of Business Finance (1.9M), Graphic Design (1.1M), and Musical Instruments (0.8M).
2. **Free courses attract learners but paid courses bring more engagement overall:** about 69% of subscribers are in paid courses (8M vs 4M in free), and paid courses hold 77% of reviews and 95.5% of lectures.
3. **Pricing differs by subject:** Web Development has the highest average price ($77.0), then Business Finance ($68.6), Graphic Design ($57.9), and Musical Instruments ($49.6).
4. **Longer content supports higher prices:** average price rises with content duration, then flattens out for very long courses.
5. **Popularity is not driven by price:** subscribers by price shows the biggest enrollments at the free end ($0) and a few at the top price points, while most price levels have relatively low enrollment.
6. **The most popular course** is a free-beginner style web course (Learn HTML5 Programming) with about 0.27M subscribers.

Recommendations

- Prioritize new courses in **Web Development**, where demand is highest.
- Use **free courses** as an entry point to grow the audience and convert learners to paid courses.
- Price courses in line with their **content duration** and subject.
- Review under-served subjects (Musical Instruments, Graphic Design) for growth opportunities.
